

ALVO MEDICAL develops innovations for operating theaters, intensive care units, dissecting rooms, endoscopy labs, veterinary clinics, laboratories. We deliver ergonomic integrated systems: panel cladding, installation systems and equipment. Our experience of almost 20 years makes us a reliable partner. The ALVO MEDICAL system consists of wall and ceiling panels, laminar flows, doors, glass elements, surgical scrub sinks, cabinets, transportation systems, operating tables and operating lights. The intelligent OR system, called ALVO INTEGRA, allows to navigate the devices in the OR from a touch panel. The production facility is located in Poland. Several company sales and distribution offices operate in select areas around the world. We cooperate with Architects in turn-key projects to support our customers through the whole investment cycle until ready-to-use condition. Advanced techniques and tools used, e.g. laser measurement of the objects enable fast and precise planning.
